Systems Analysis and Design

Online Food Ordering System

Planning Phase — Interview and Questionnaire

الممسوحه ضوئيا بـ CamScanner

Part 1: Interview Questions and Answers

Interviewee: Restaurant Manager

Purpose: To understand the current ordering process and identify the problems that the new system should solve.

Section A: Open-Ended Questions

Q1. How do customers currently place their food orders?

Answer: Customers usually place orders by phone or visit the restaurant directly. Some customers may also use social media to contact the restaurant.

Q2. What are the main problems with the current ordering process?

Answer: The main problems are incorrect orders, busy phone lines, delays in responding to customers, and difficulty tracking orders.

Q3. How do employees communicate orders to the kitchen?

Answer: Employees usually write orders on paper or communicate them verbally to the kitchen staff.

Q4. What features would you like to have in the new system?

Answer: I would like customers to view the menu, check prices, place orders online, choose a payment method, and track their order status.

Section B: Closed-Ended Questions

Q6. Does the restaurant currently accept orders by phone?

Answer: Yes.

Q7. Which payment method should the system support?

Answer: Cash on delivery, online card payment, or mobile wallet.

Q8. Would you like customers to view the menu and prices online?

Answer: Yes.

Q9. Which method do customers mainly use to place their orders?

Answer: Phone calls.

Q10. How should customers receive updates about their orders?

Answer: Customers can be informed by phone call or SMS when their order is ready or on its way.

Part 3: Interview and System Analysis Report

- **Interview Opinion**

The interview suggests that the current food ordering process needs improvement. Taking orders by phone and recording them manually can lead to mistakes and delays. An online food ordering system could help organize orders, display menu items and prices, and make the ordering process easier for customers and employees.

- **Interview Feelings**

The restaurant manager is concerned about mistakes and delays in the current ordering process. The manager believes that an online food ordering system could improve the work process and make ordering easier for customers. However, employees may need training to use the new system effectively.

- **Current State of the System**

Currently, the restaurant receives food orders mainly through phone calls and direct visits. Employees record orders manually or communicate them verbally to the kitchen staff. This process may lead to incorrect orders, delays, and difficulties in tracking order status. Customers also have to

الممسوحه ضوئيا بـ CamScanner

contact the restaurant to ask about menu items, prices, or their order status.

- **System Goals**

The main goal of the proposed system is to make the food ordering process easier, faster, and more organized. The system aims to allow customers to view the menu and prices, place orders online, choose their preferred payment method, and track their order status. It also aims to reduce ordering mistakes, save employees' time, improve communication between employees and customers, and increase customer satisfaction.
